

# WP9: SERVICE DEMONSTRATION

Speaker: Lorenzo Busetto (CNR-IREA)

## Main Contributors

Dimitris Stavrakoudis, Hana Minakou, Ioannis Gitas - **AUTH**

Manuel Campos, Goncal Grau, Javier Garcia Haro - **UVEG**

Francesco Holecz, Massimo Barbieri, Luca Gatti - **SARMAP**

Elisabetta Ricciardelli, Mariassunta Viggiano, Francesco Di Paola, Filomena Romano - **IMAA**

Mirco Boschetti, Lorenzo Busetto, Alberto Crema, Francesco Nutini, Luigi Ranghetti, Daniela Stroppiana - **IREA**

Roberto Confalonieri, Valentina Pagani, Tommaso Stella, Carlo Gilardelli, Ermes Movedi - **UMIL**

Ignacio Miralles, Carlos Granell, Sven Casteleyn - **UJI**

# PRESENTATION OUTLINE

- ✓ **Introduction: WP Objectives and workplan**
- ✓ Tasks 9.1/9.2: Service application in Europe
- ✓ Task 9.3: Service application Outside Europe
- ✓ Final Remarks

## WP9: SERVICE DEMONSTRATION

**WP Leader: Lorenzo Busetto**

**Time Span: Months 13 - 34**

### **Main Objectives of the WP**

- ✓ Performing the **overall service demonstration** during rice growing seasons 2015 and 2016 through:
  - 1) Test of the **processing chains and data/information flow**
    - EO data/product and in-situ data acquisition
    - ERMES EO and modelling products generation
  - 2) Provide **information and tools** to end-users:
    - ERMES Geoportal and smart app
    - Customized dissemination of information to users
- ✓ Service Demonstration on 2015 and 2016 rice seasons constituted ERMES **Milestones IV and V**, which achievement was foreseen for Months 24 and 34

# ERMES DEMONSTRATION: KEY CONCEPTS

## Generation of products and Information

## Deployment

## Dissemination and Exploitation

 **Rice maps ; Flooding Maps** (EP\_R1) **WP5**

 **Phenology maps** (EP\_R2) **WP5**

 **Meteo maps** (EP\_R5) **WP5**

 **Regional Blast Risk alert** (EI\_R2) **WP6**

 **LAI maps** (EP\_R4 – EP\_L4) **WP5**

 **Constant patterns maps** (EP\_L2) **WP5**

 **Seasonal patterns maps** (EP\_L3) **WP5**

 **Local Biotic risks; Development stage** (EI\_Lx) **WP6**

 **Yield estimation** (EI\_R2) **WP6**

 **AgriNotebook smart app** **WP7**

*Regional Service*

**ERMES GEOPORTALS** **WP7**

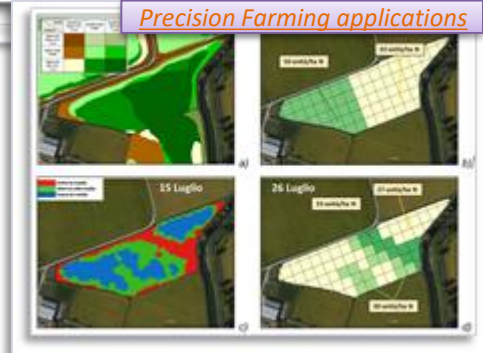

*Local Service*

*Meetings with end users/stakeholders*

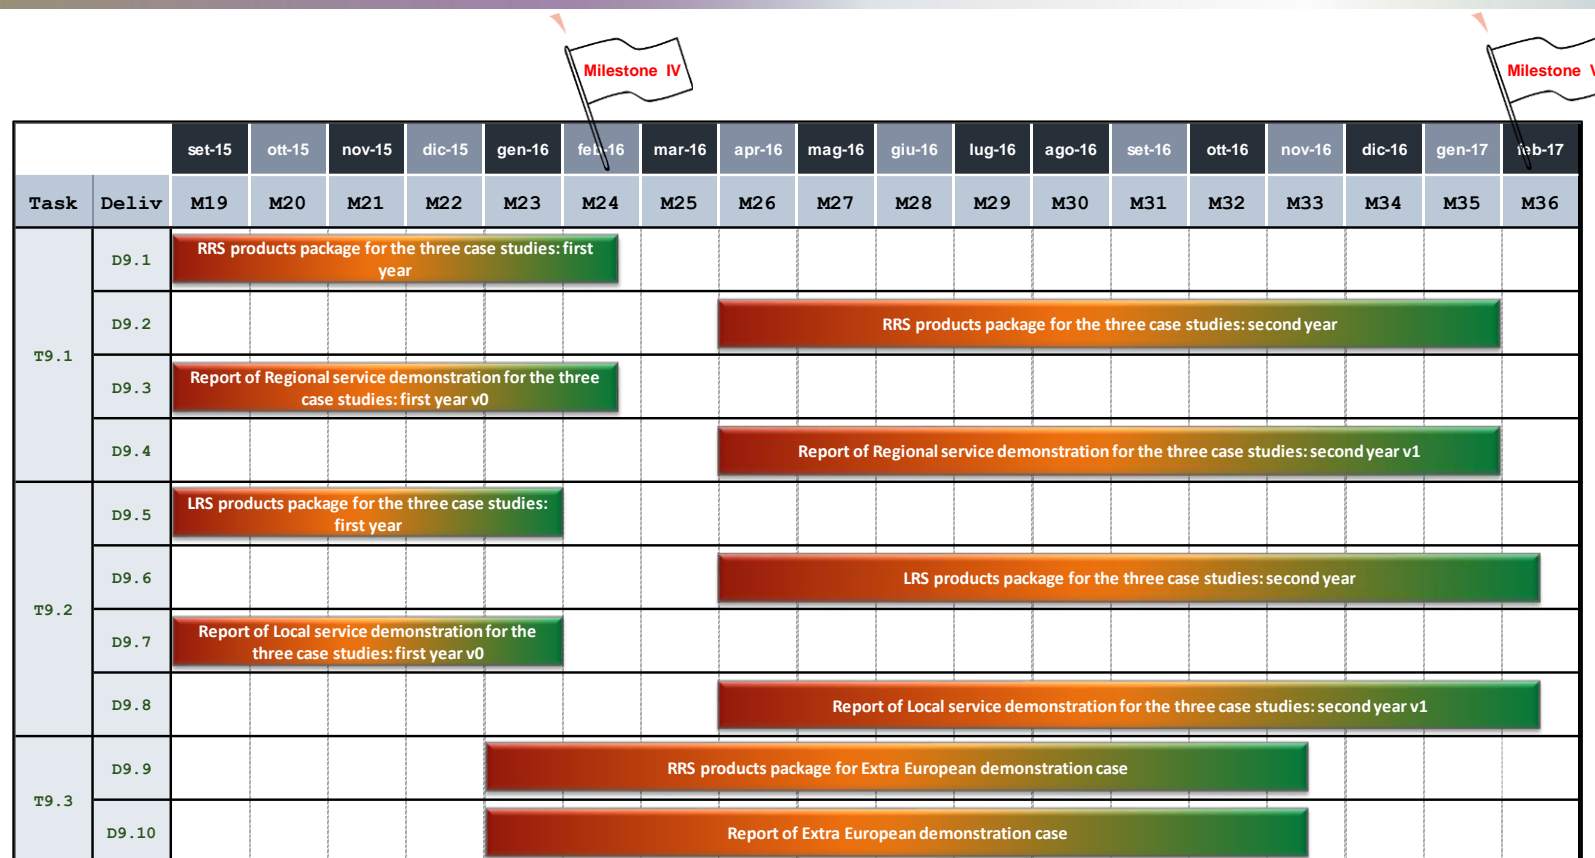

*Synthetic agro-monitoring bulletins*

*Precision Farming applications*

# WP9: SERVICE DEMONSTRATION - SECOND REPORTING PERIOD

*Workplan for months 18-36 with reference to expected deliverables and Milestones*

- ✓ Conclusion of first year of demonstration → Milestone IV
- ✓ Second year of demonstration (including Extra-European areas) → Milestone V

## PRESENTATION OUTLINE

- ✓ Introduction: WP Objectives and workplan
- ✓ **Service Demonstration in Europe**
  - ✓ *Task 9.1: Service application at regional scale*
  - ✓ *Task 9.2: Service application at local scale*
- ✓ Task 9.3: Service application Outside Europe
- ✓ Final Remarks

## Task 9.1: Service Application at Regional Scale

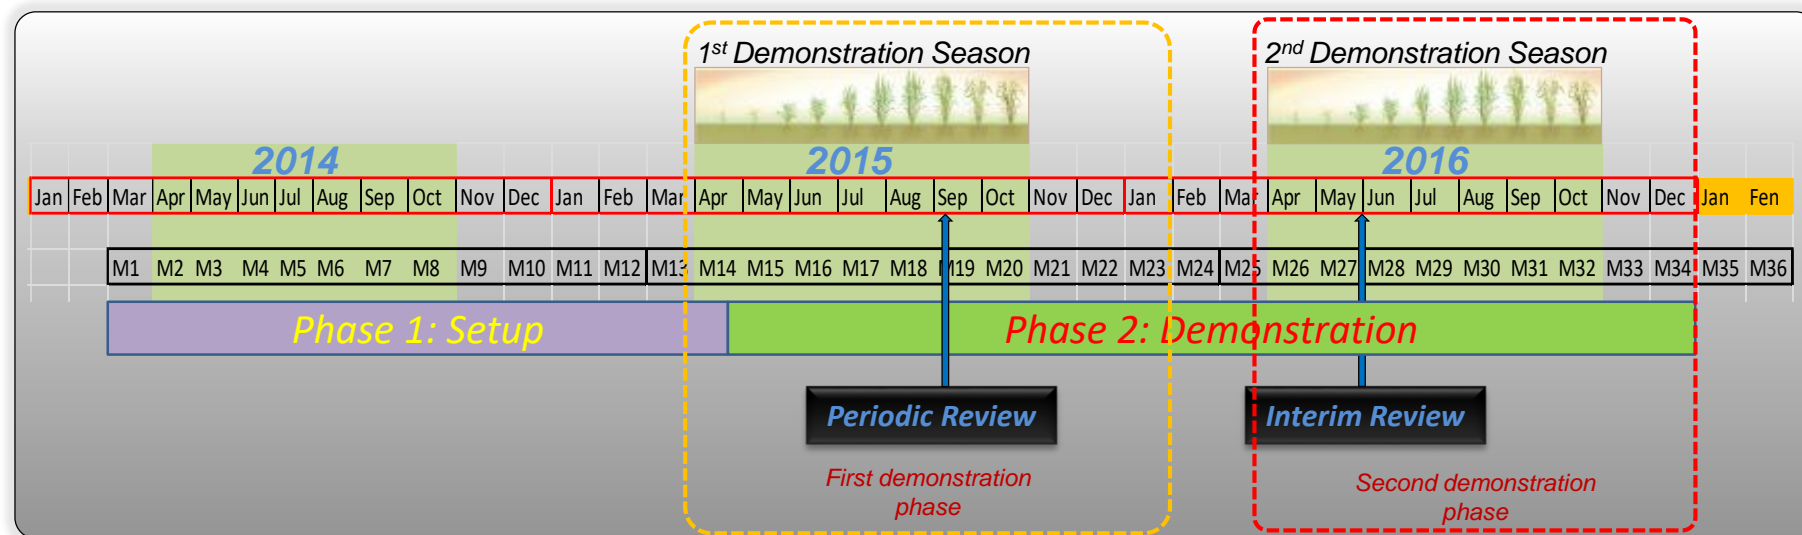

**Task Leader:** Valentina Pagani (UMIL)

**Time Span:** Month 13 - 34

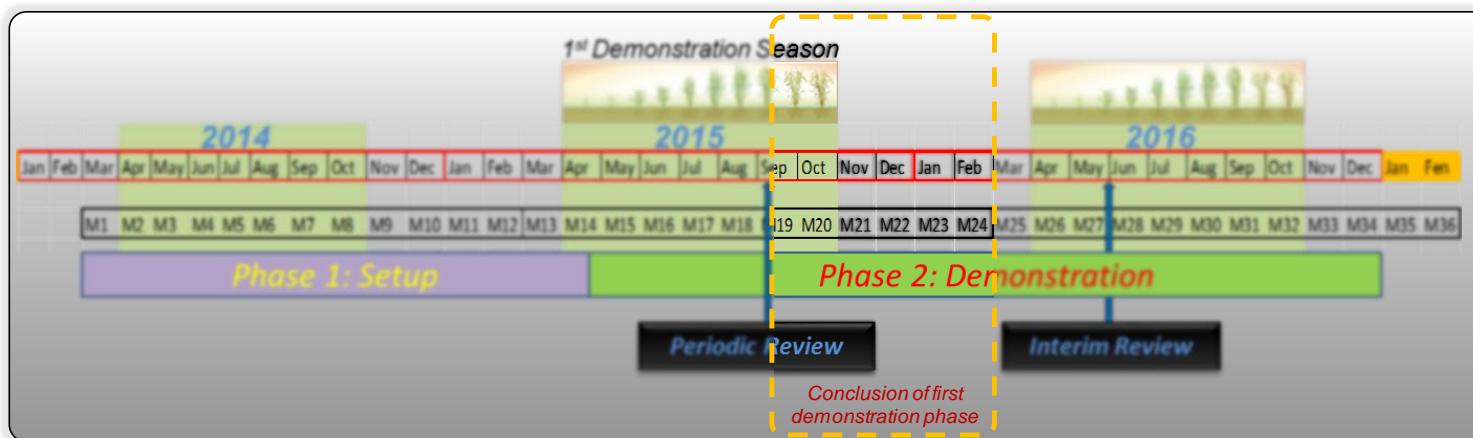

## Task 9.2: Service Application at Local Scale

**Task Leader:** Dimitris Stavrakoudis (AUTH)

**Time Span:** Month 13 - 34

## M18-23: CONCLUSION OF THE FIRST DEMONSTRATION PHASE – RICE SEASON 2015

**1) Finalization of ERMES regional and local products for 2015**

**2) Demonstration and promotion of the developed services**

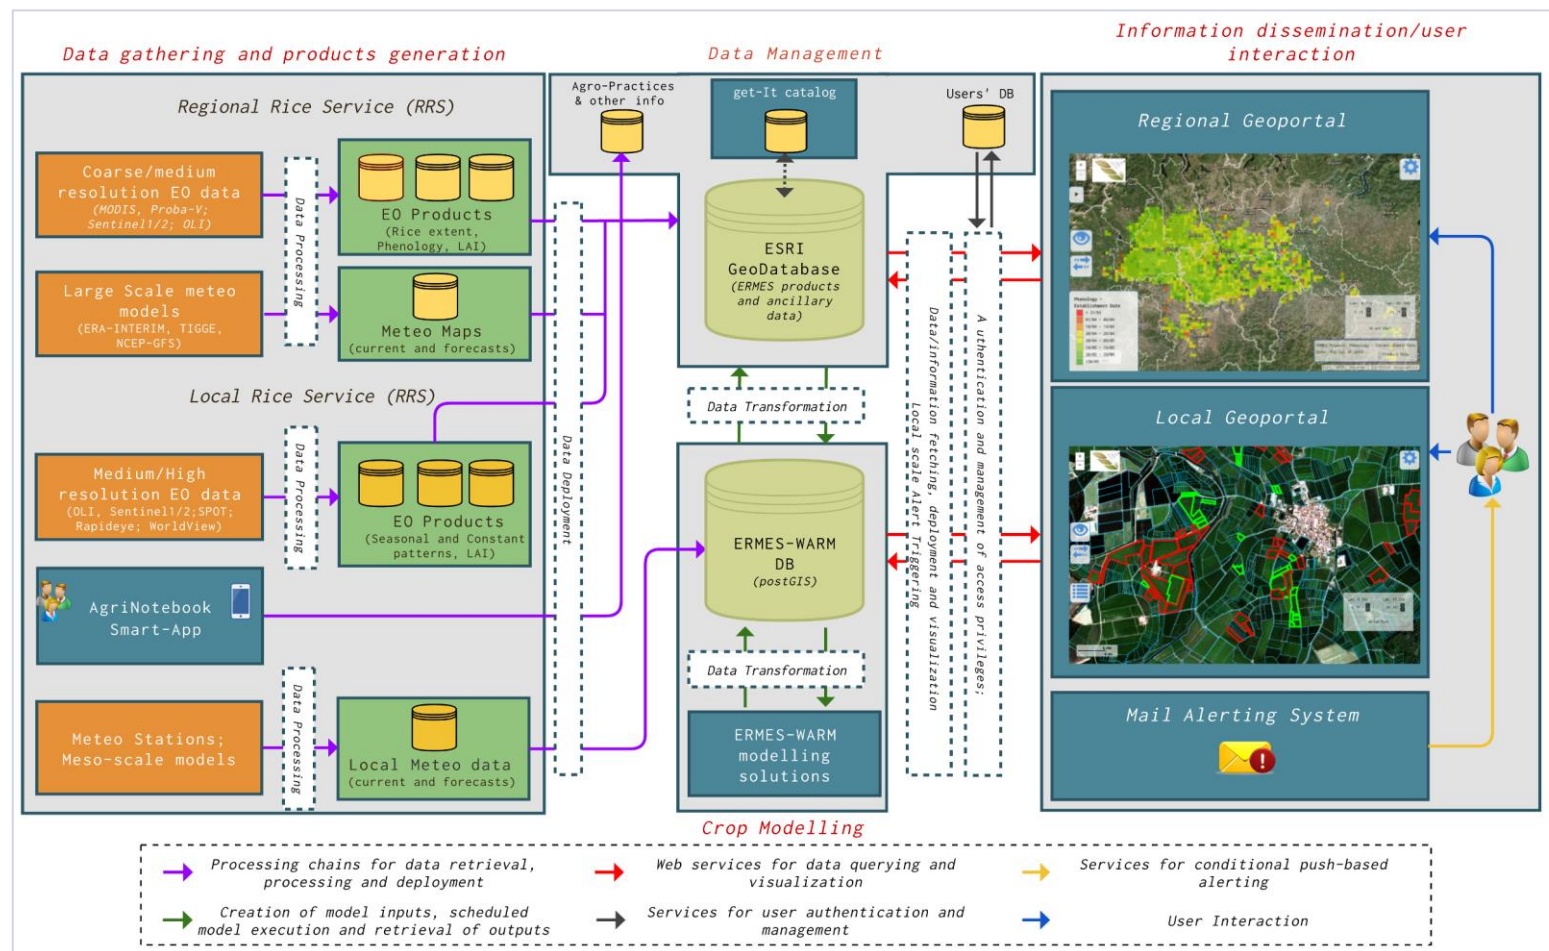

**3) Collection of feedback from users**

- ✓ Information for **tuning/improving** processing chains (e.g., Regional Meteo and Modelling; Seasonal Patterns; ...)
  - ✓ Better understanding of **user's needs and expectations**
  - ✓ Extension of the **users' base** (e.g., new users IPLA, JRC, Agrinos....)

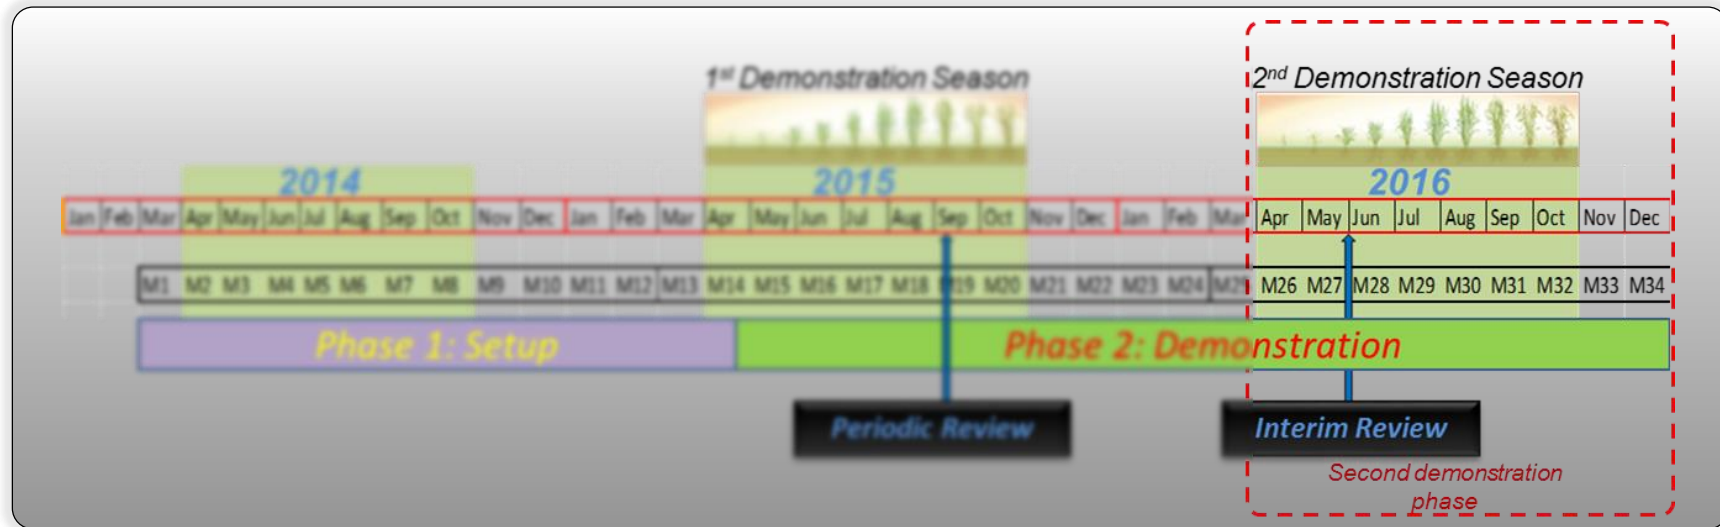

## OUTCOME: OPERATIONAL ERMES MONITORING SYSTEM

**All pieces of the «puzzle» in place for 2016 !**

## M25-34: SECOND DEMONSTRATION PHASE – RICE SEASON 2016

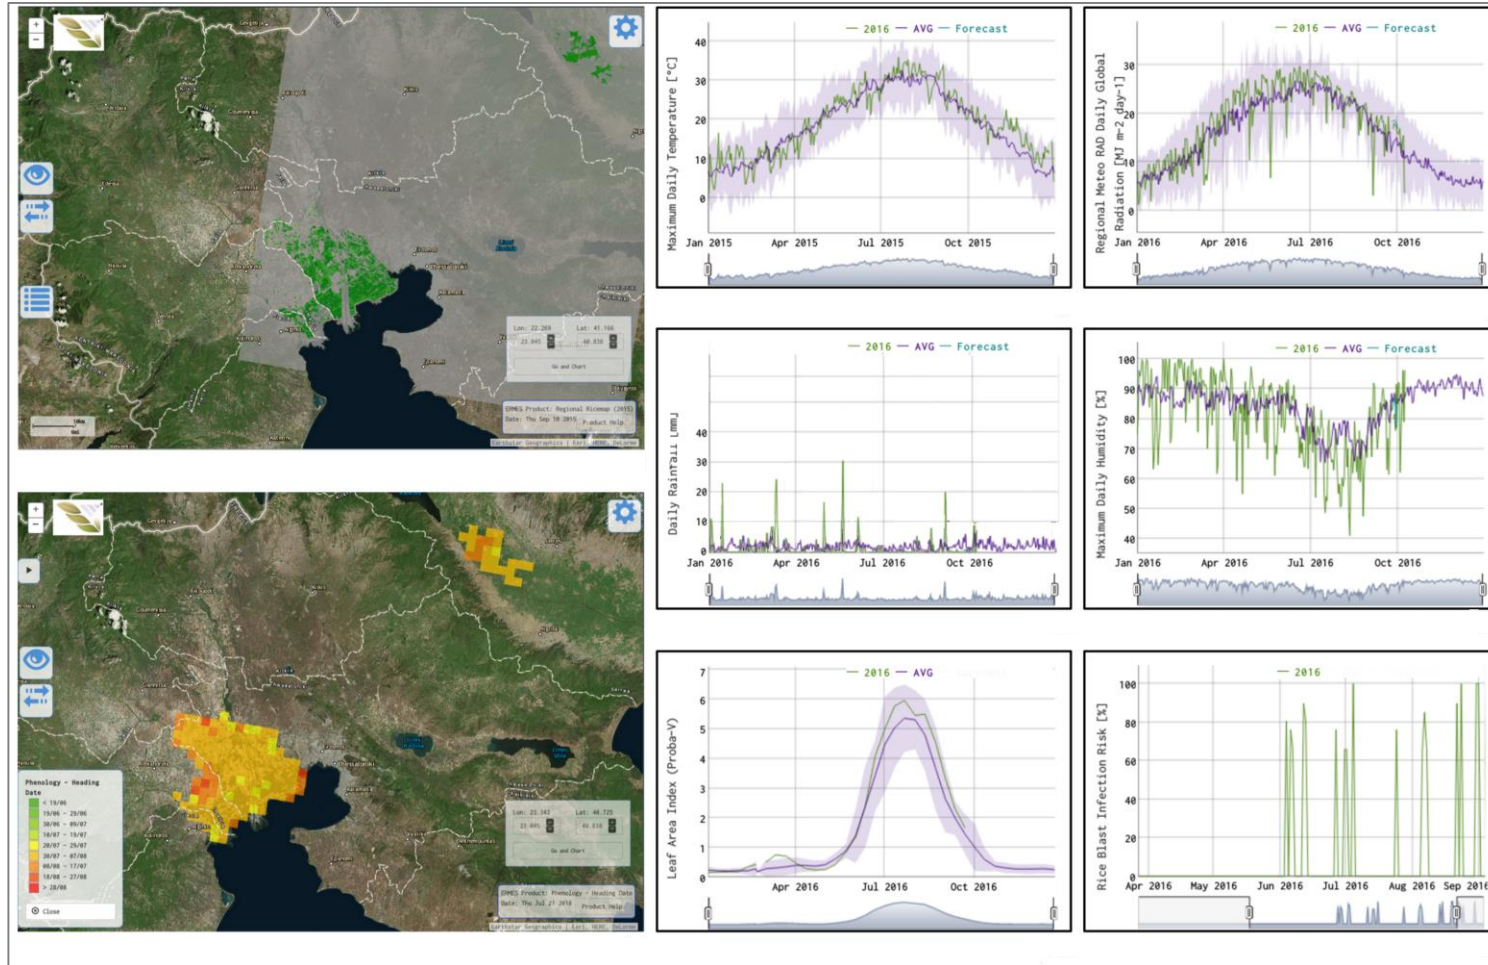

- 1. Operational Near Real Time generation of all products (including some “new” ones) and deployment through geoportals**
- 2. Exploitation of products/services for high-end applications**
- 3. Dissemination to end users**

# PRESENTATION OUTLINE

- ✓ Introduction: WP Objectives and workplan
- ✓ **Service Demonstration in Europe**
  - ✓ Task 9.1: Service application at regional scale
  - ✓ *Task 9.2: Service application at local scale*
- ✓ Task 9.3: Service application Outside Europe
- ✓ Final Remarks

# TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

## REGIONAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

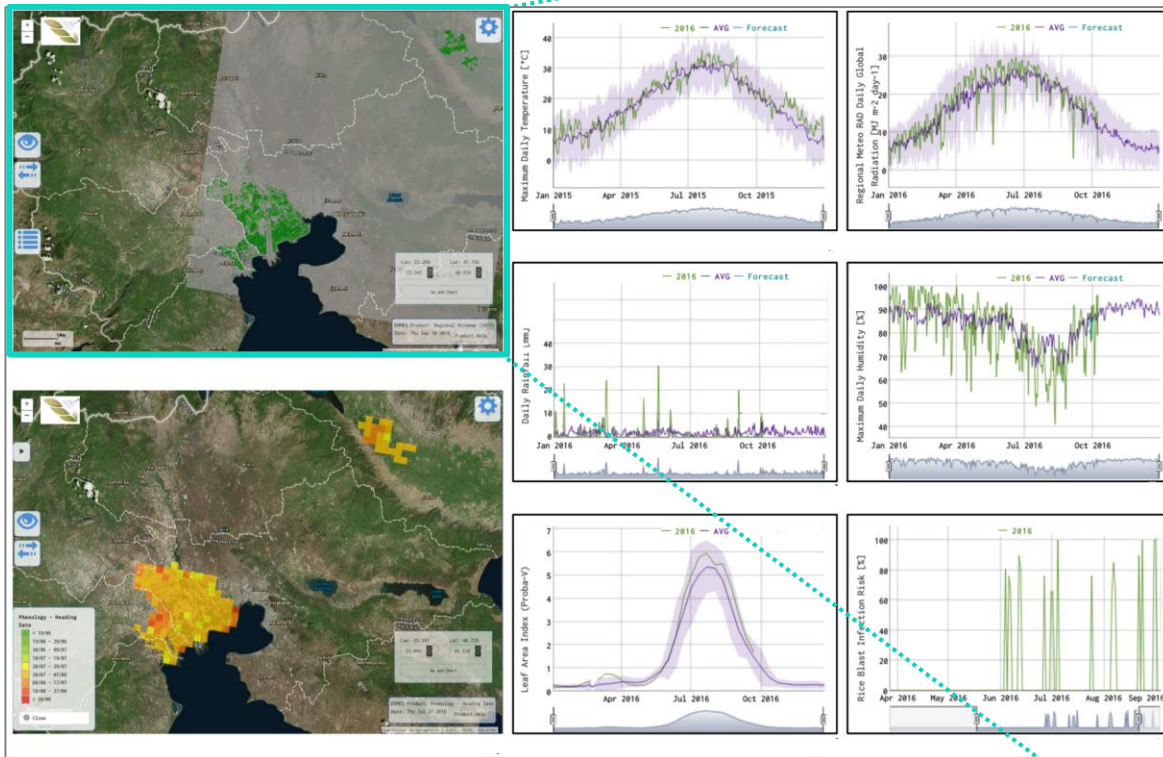

**Interface of ERMES Regional Geoportal and examples of provided information**

# TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

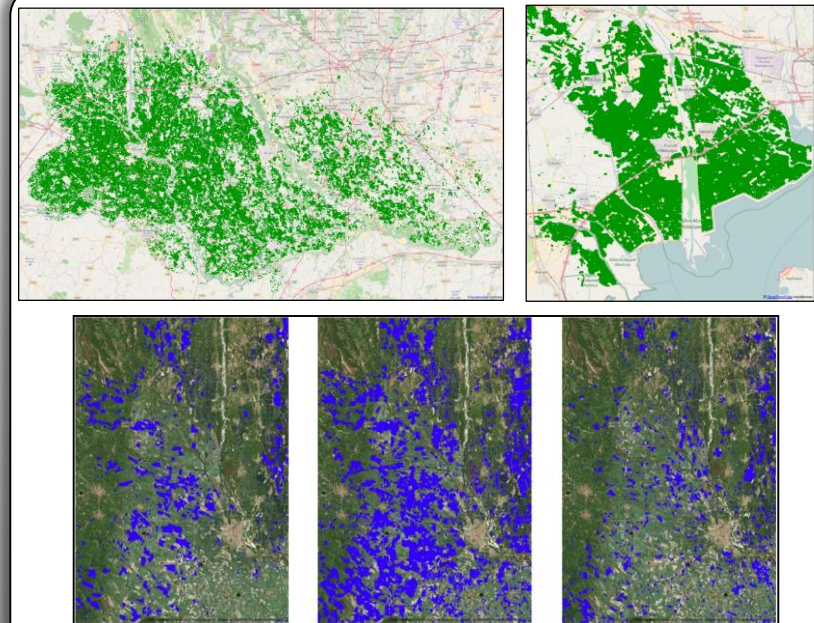

## REGIONAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

**Rice maps ; Flooding Maps (WP 5)**  
(EP\_R1)

**WP5**

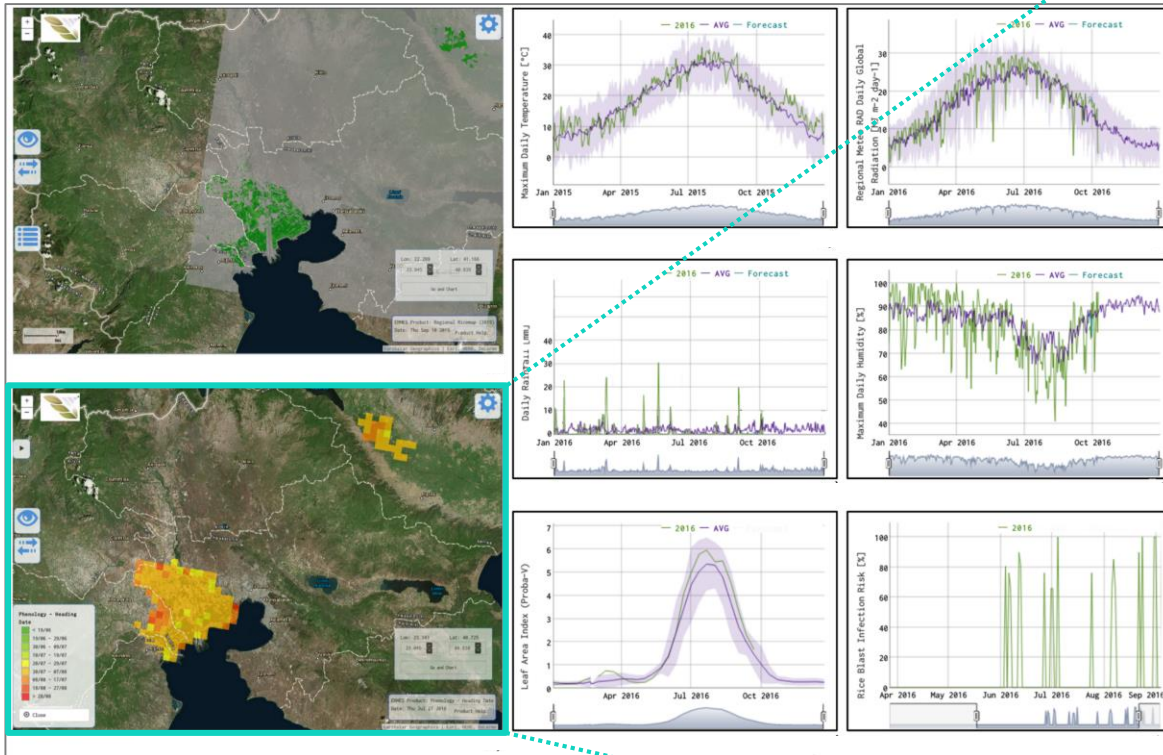

Rice crop maps (30 m resolution)  
Periodic Maps of flooding conditions

**NRT estimation of rice cultivated area**  
**Interannual variations in rice area**  
**Spatio-temporal changes in irrigation schemes**

# TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

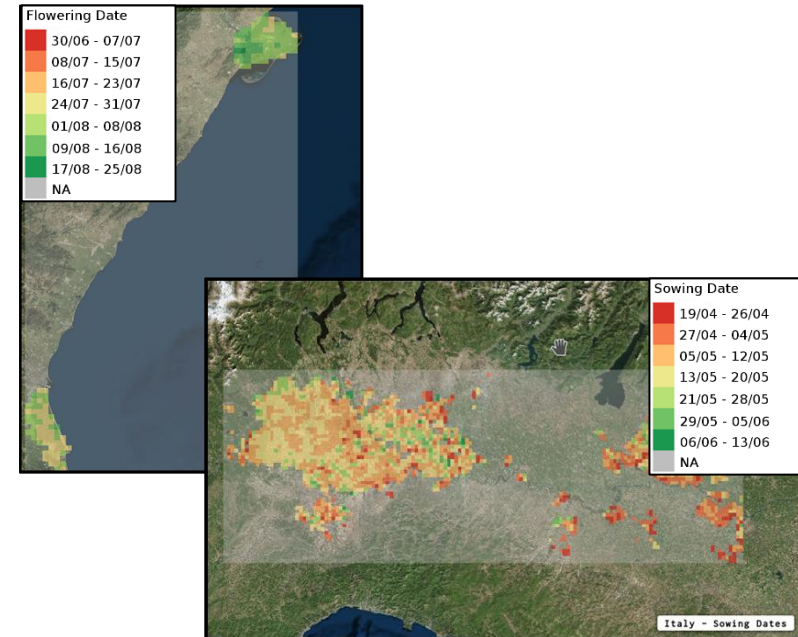

## REGIONAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

### Phenology maps (WP 5) (EP\_R2)

WP5

### Sowing and Flowering dates maps (2x2 km)

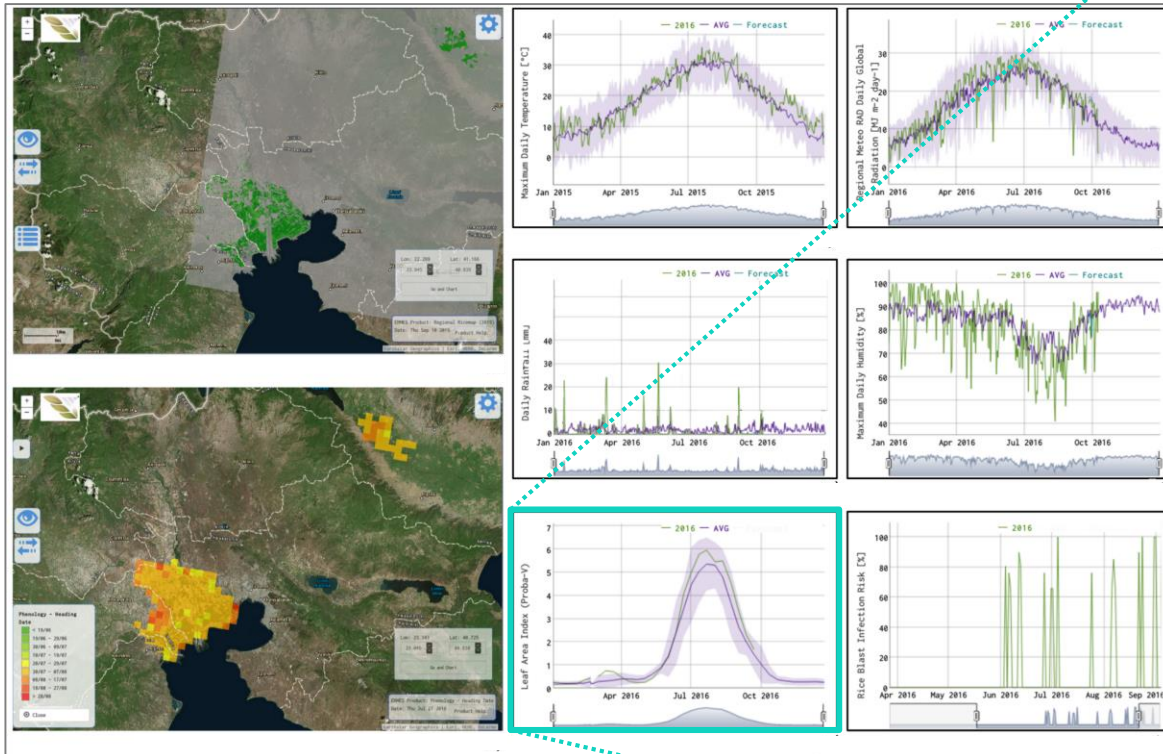

*Identification of key phenological stages  
and anomalies  
Inputs for regional modelling*

## TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

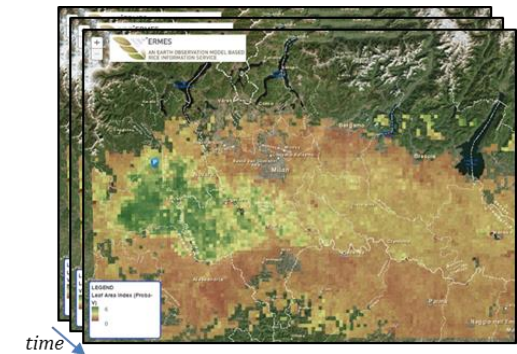

### REGIONAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

#### Leaf Area Index maps (WP 5) (EP\_R3)

WP5

Decadal maps from MODIS/PROBA-V  
(2x2 km)

**Anomalies in crop growth  
Inputs for regional modelling**

# TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

## REGIONAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

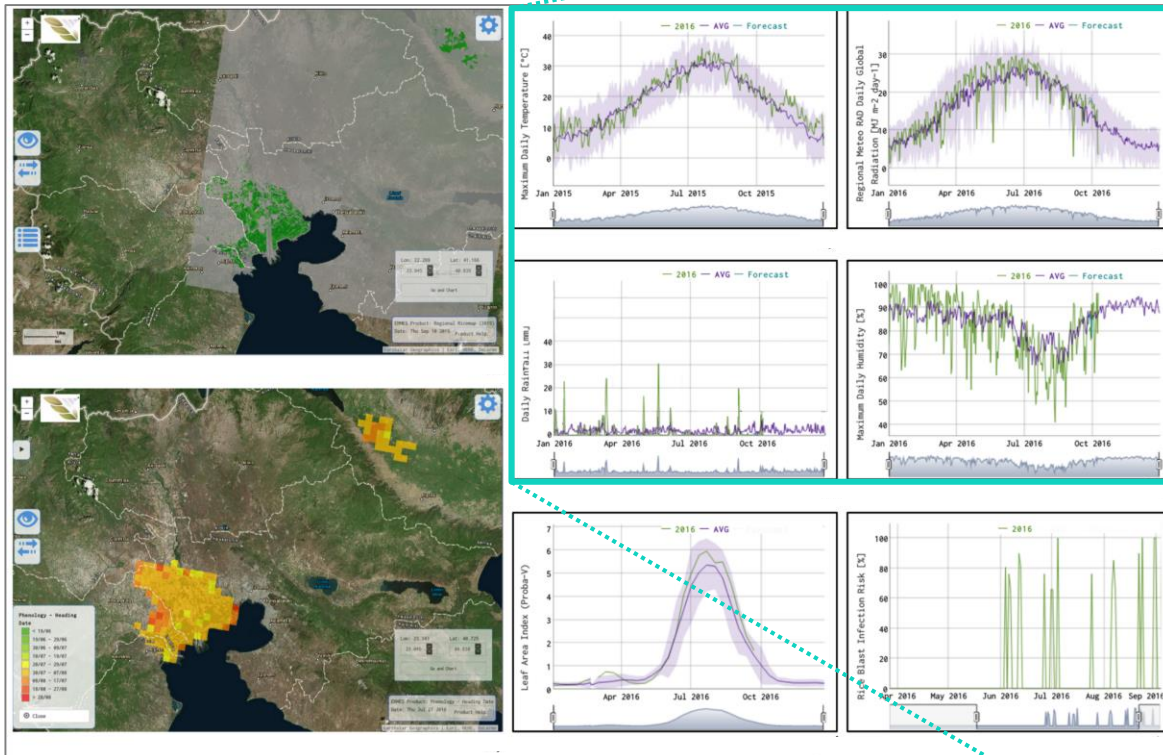

### Meteorological Maps and Forecasts (WP 5) (EP\_R4)

WP5

Daily maps of P, Tmax, Tmin, Precipitation, Humidity, Wind Speed, radiation (2x2 km)

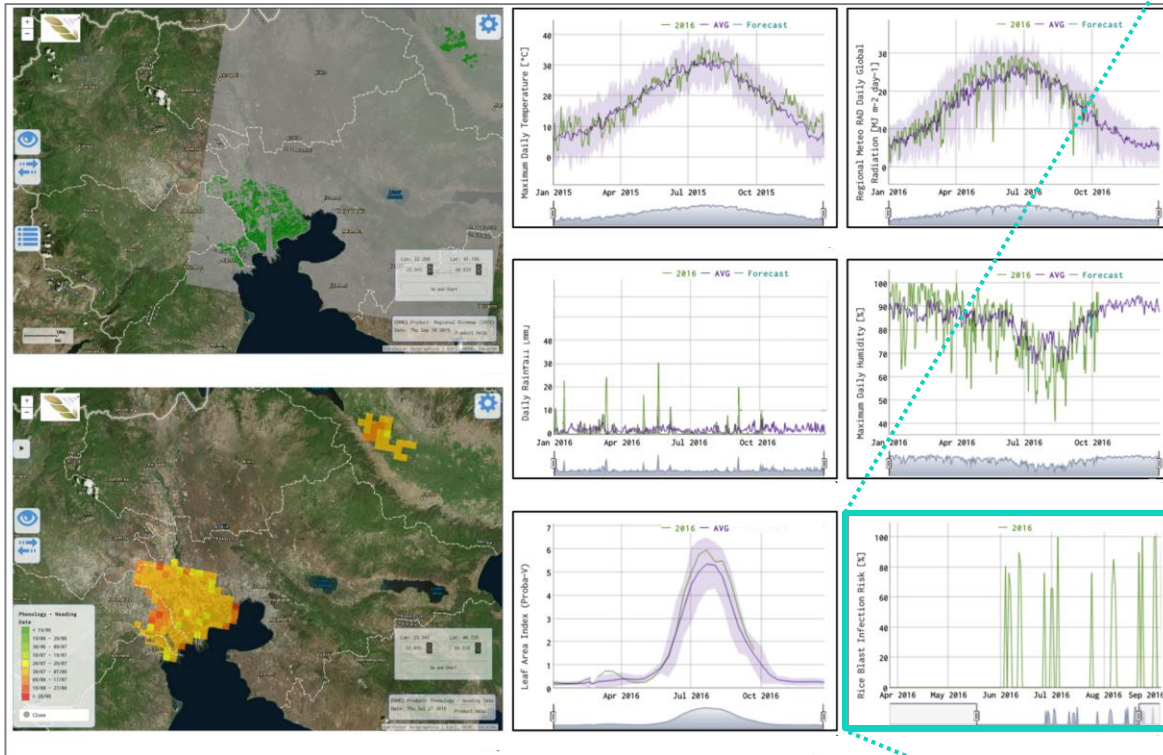

*Anomalies in weather conditions;  
Inputs for regional modelling*

# TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

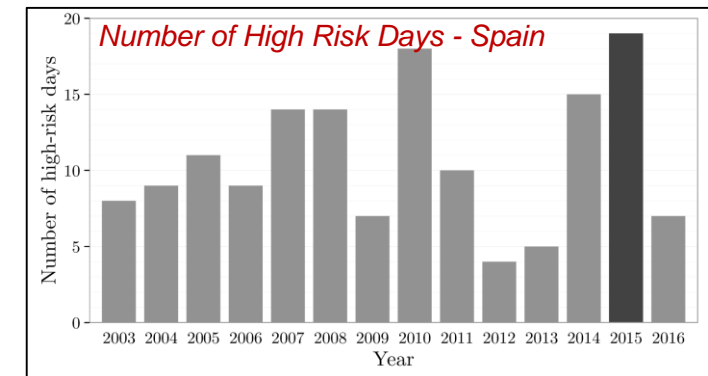

## REGIONAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

### Potential Risk of Rice Blast Infection (WP 6) (EI\_R3)

WP6

Daily risk maps – Modelling Results  
Uses Meteo, Phenology and LAI maps as inputs !

**Forecasting high-risk periods**  
**Qualitative analysis on impact on yield**

# TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

## REGIONAL RICE SERVICE – HIGH-END APPLICATIONS

### Yield Forecast Bulletins

- Agro-monitoring bulletins, analyzing the on-going season and providing yield forecasts for selected varieties and rice districts
- ERMES Meteo, Phenology and LAI maps used as inputs in regional modelling solution
- Statistical postprocessing of modelling outputs and official statistics
- Two releases in Italy for ENR (at Flowering and Harvesting); One release for Spain and Greece

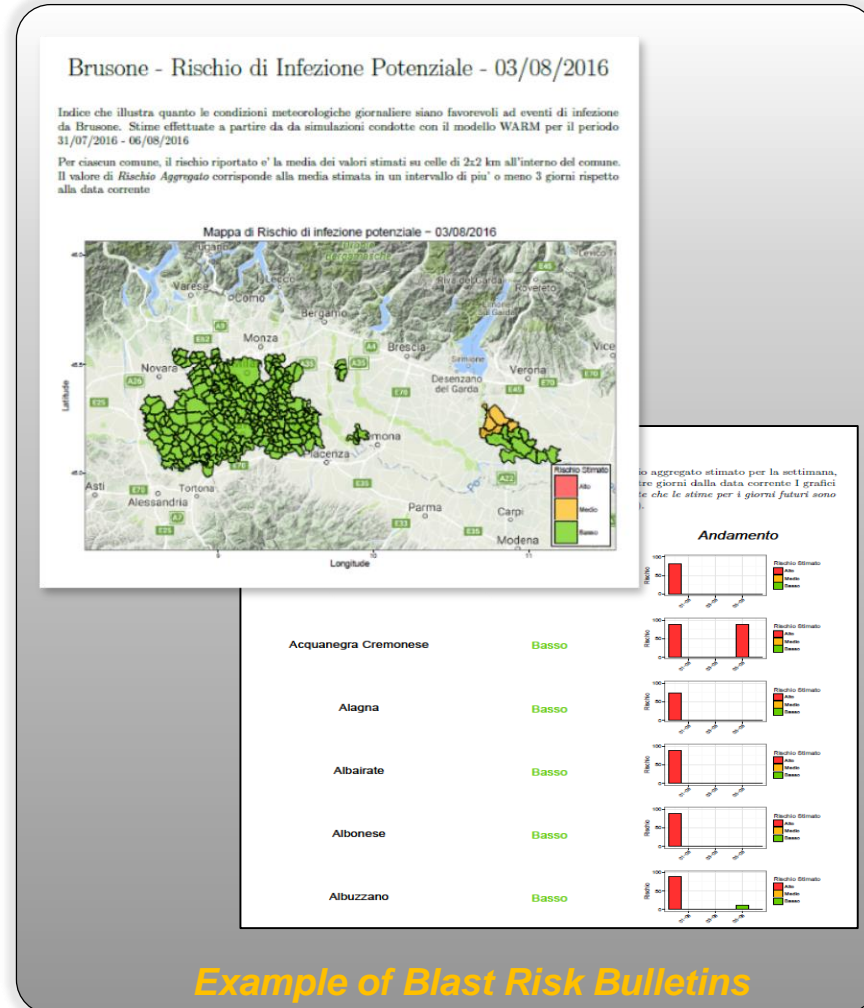

### Yield Forecast Bulletins

## REGIONAL RICE SERVICE – HIGH-END APPLICATIONS

# Blast Risk Bullettins

- Automatic generation from ERMES modelling outputs
- Aggregation at municipality level and weekly time step
- Daily deployment of rice blast risk bulletins on website of **Plant Health Service of Lombardy Region**

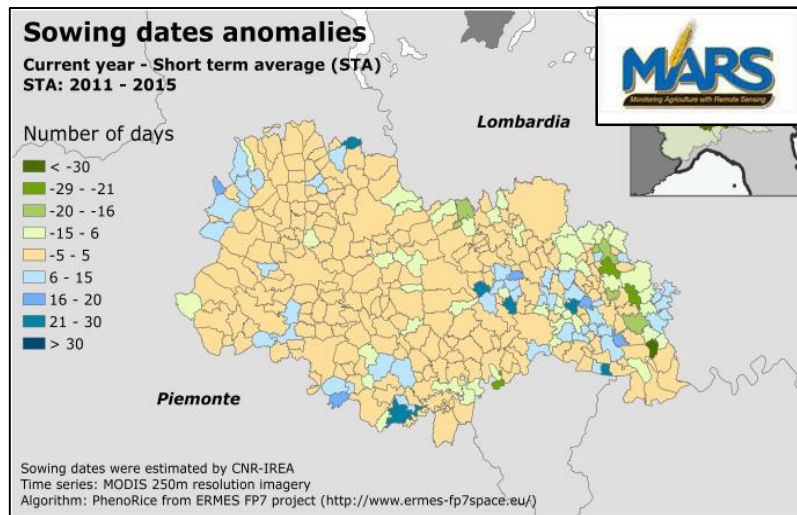

## TASK 9.1: SERVICE APPLICATION AT REGIONAL SCALE

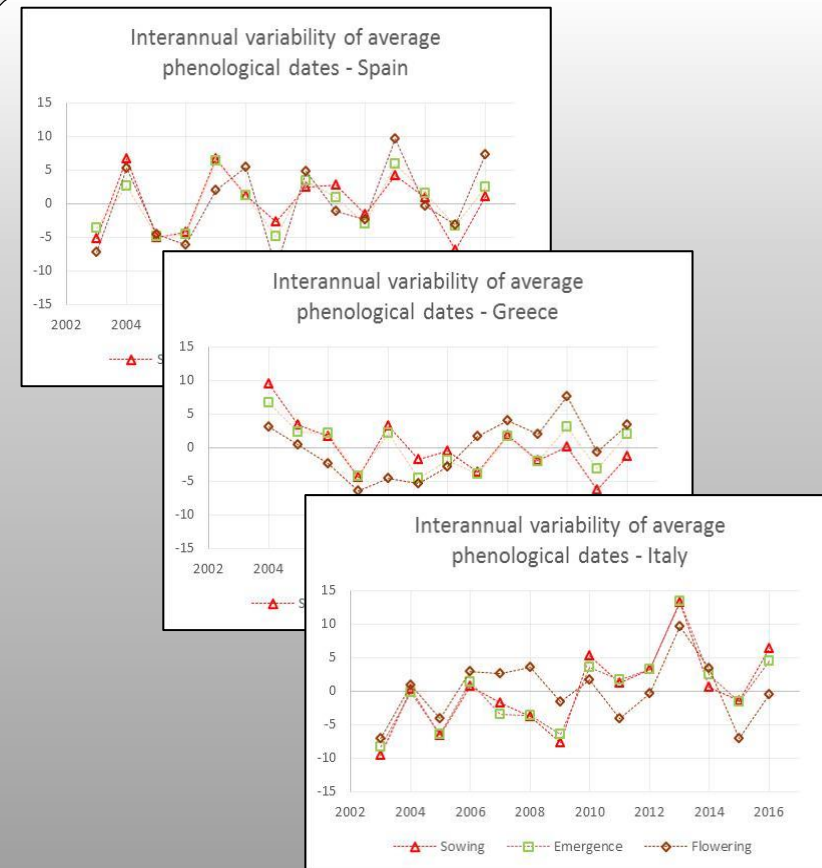

### REGIONAL RICE SERVICE – HIGH-END APPLICATIONS

#### Phenological development analysis

- Comparison of on-going season with LTA data → Highlights of anomalies
- Data exploited by JRS-MARS to issue their 2016 agro-monitoring bulletins

<https://ec.europa.eu/jrc/sites/jrcsh/files/jrc-mars-bulletin-vol24-no7.pdf>

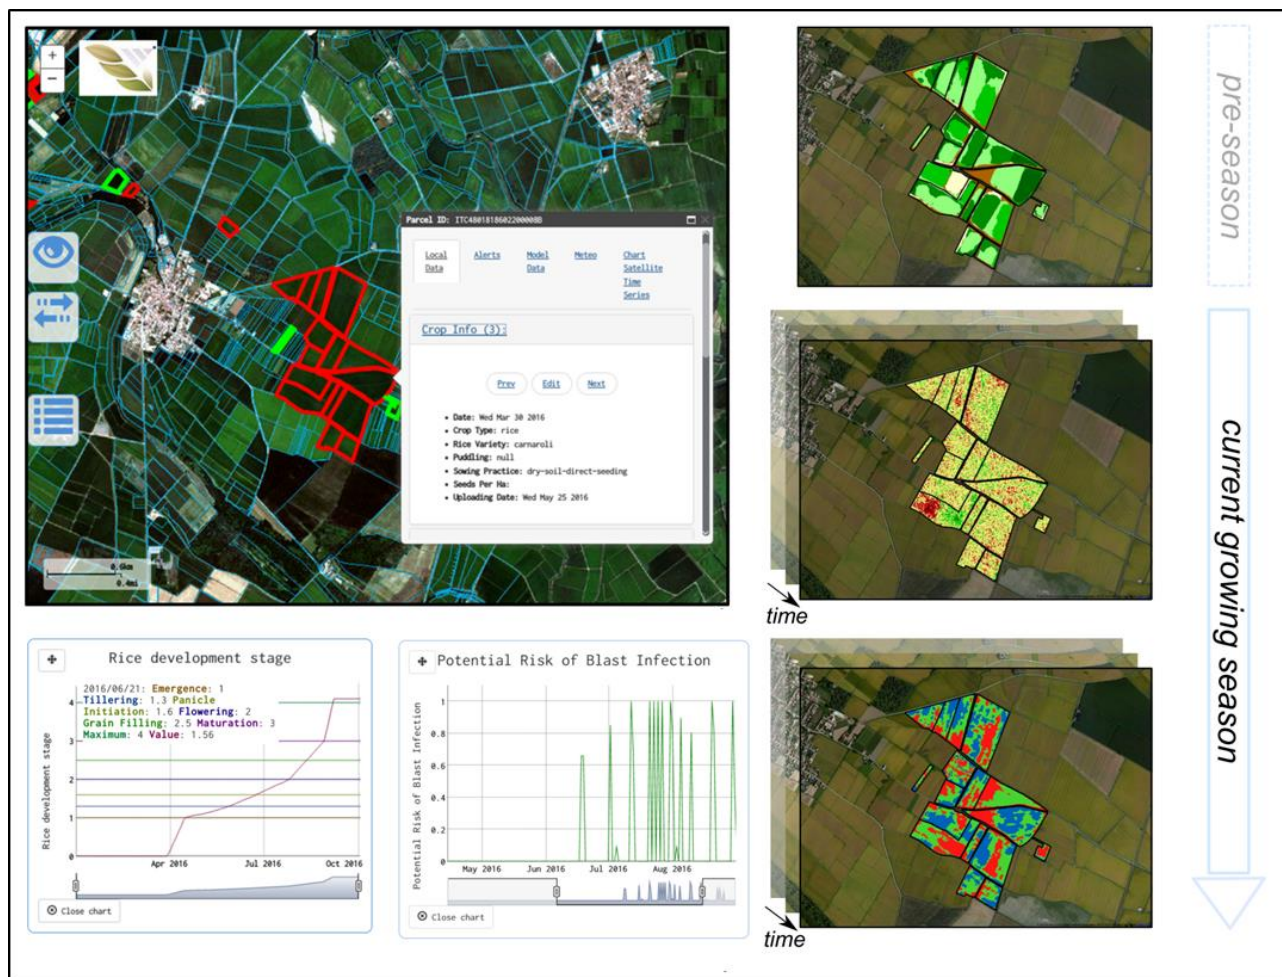

**NRT comparison of current vs. previous seasons**

# PRESENTATION OUTLINE

- ✓ Introduction: WP Objectives and workplan
- ✓ **Service Demonstration in Europe**
  - ✓ *Task 9.1: Service application at regional scale*
  - ✓ *Task 9.2: Service application at local scale*
- ✓ Task 9.3: Service application Outside Europe
- ✓ Final Remarks

## TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

### LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

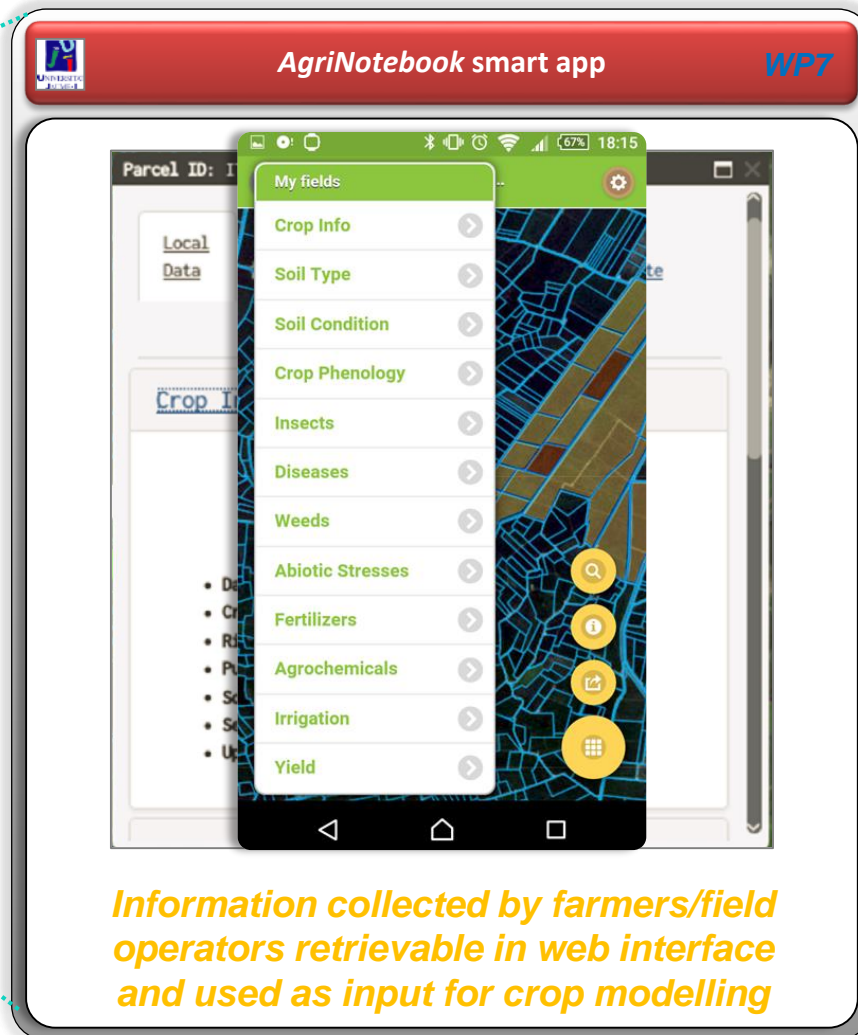

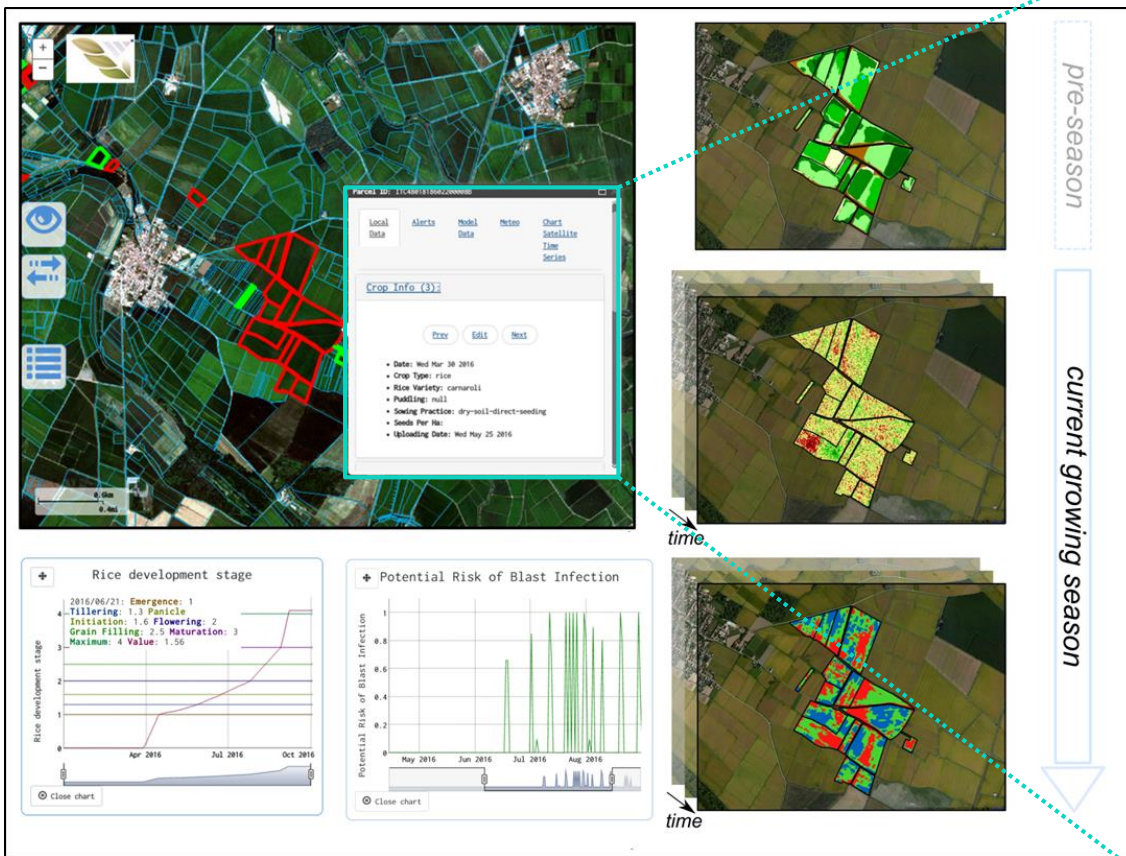

**Interface of ERMES Local Geoportal and examples of provided information**

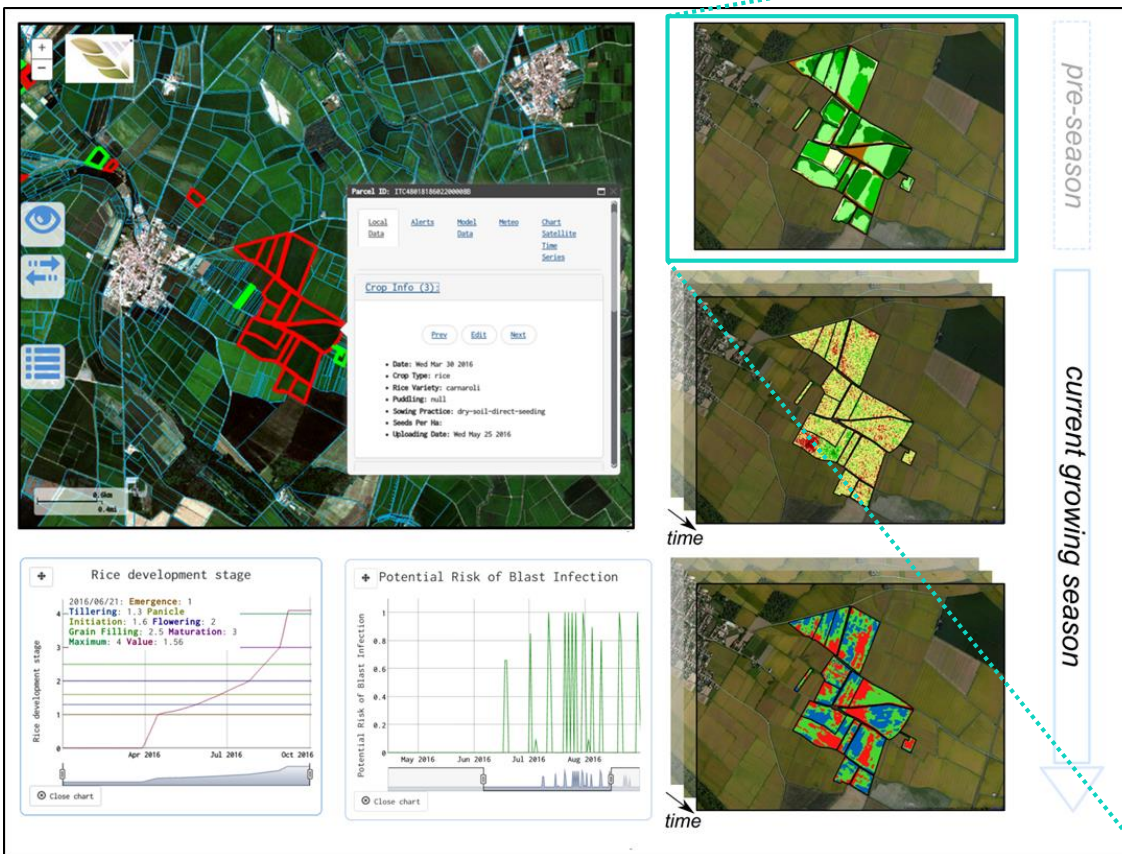

## TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

### LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

# TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

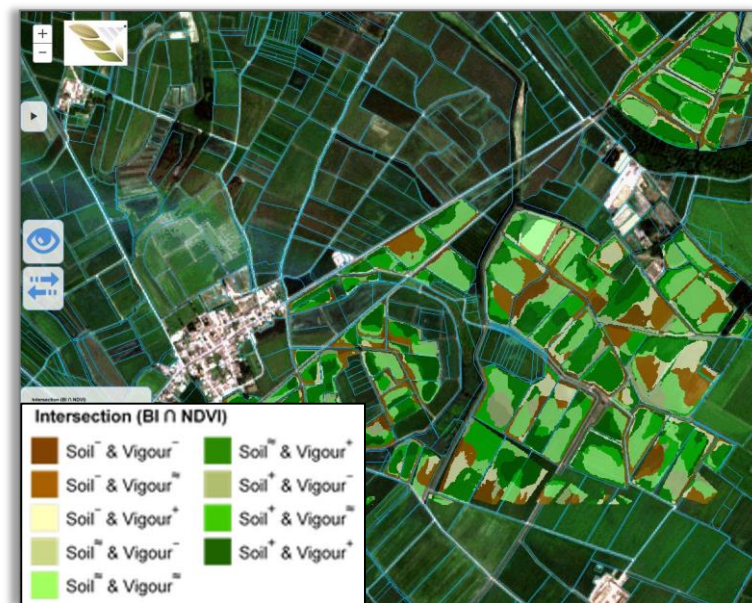

## LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

**Constant pattern maps**  
(EP\_L2)

**WP5**

Based on the analysis of archive satellite images

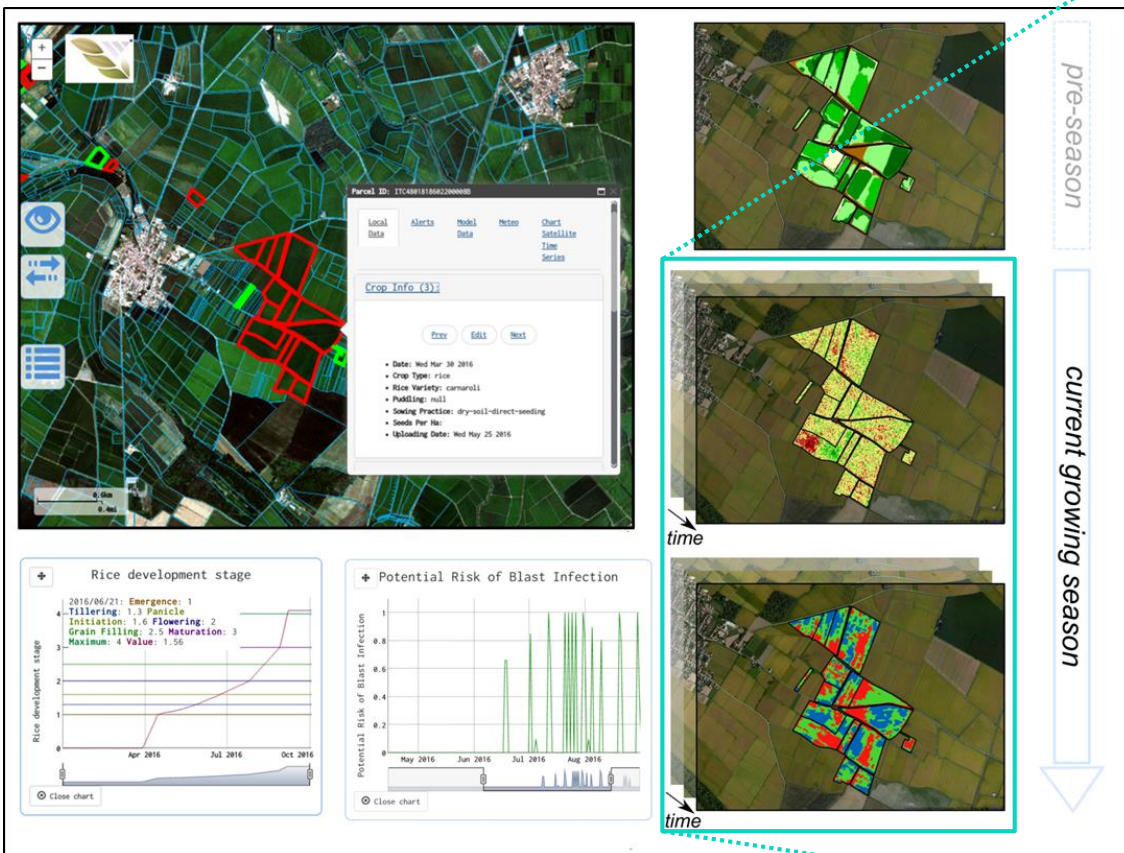

**Highlight intrinsic variability of single rice parcels, causing constant yield differences on different years**

# TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

## LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

pre-season

current growing season

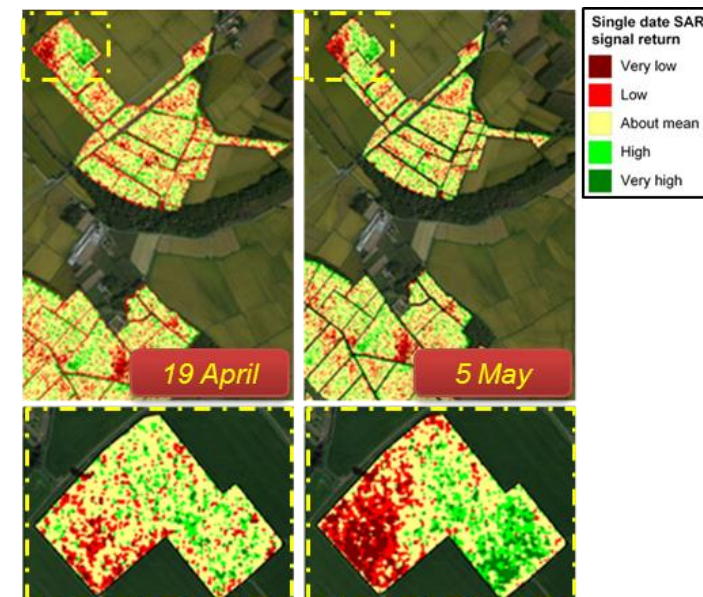

### Seasonal pattern maps

(EP\_L3; EI\_L7)

WP5

Based on the analysis of satellite Images acquired in **critical moments of the season**

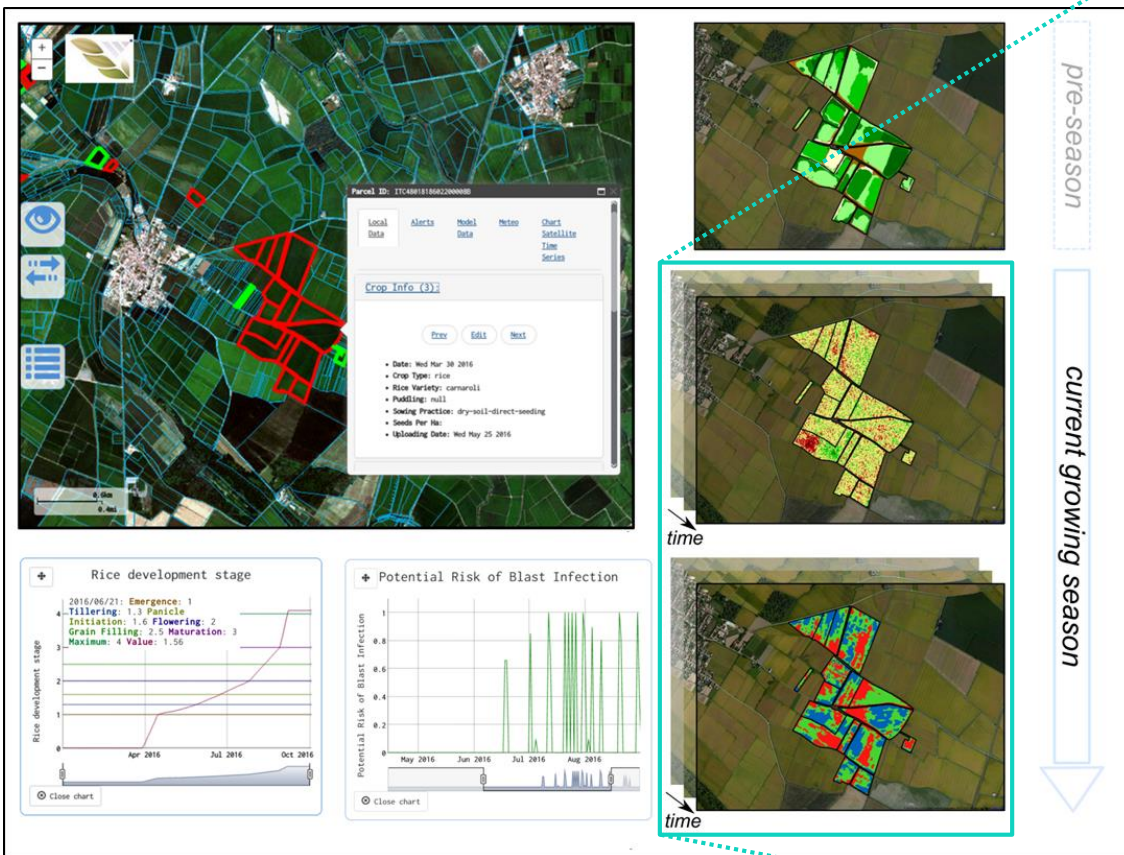

**«Early» season** → High-Resolution SAR (CSK – 3m)

**Highlight problems related to bad germination/other early season problems**

# TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

## LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

pre-season

current growing season

### Seasonal pattern maps (EP\_L2)

WP5

Based on the analysis of satellite Images acquired in **critical moments of the season**

**«Late» season** → High-Resolution optical (RapidEye)

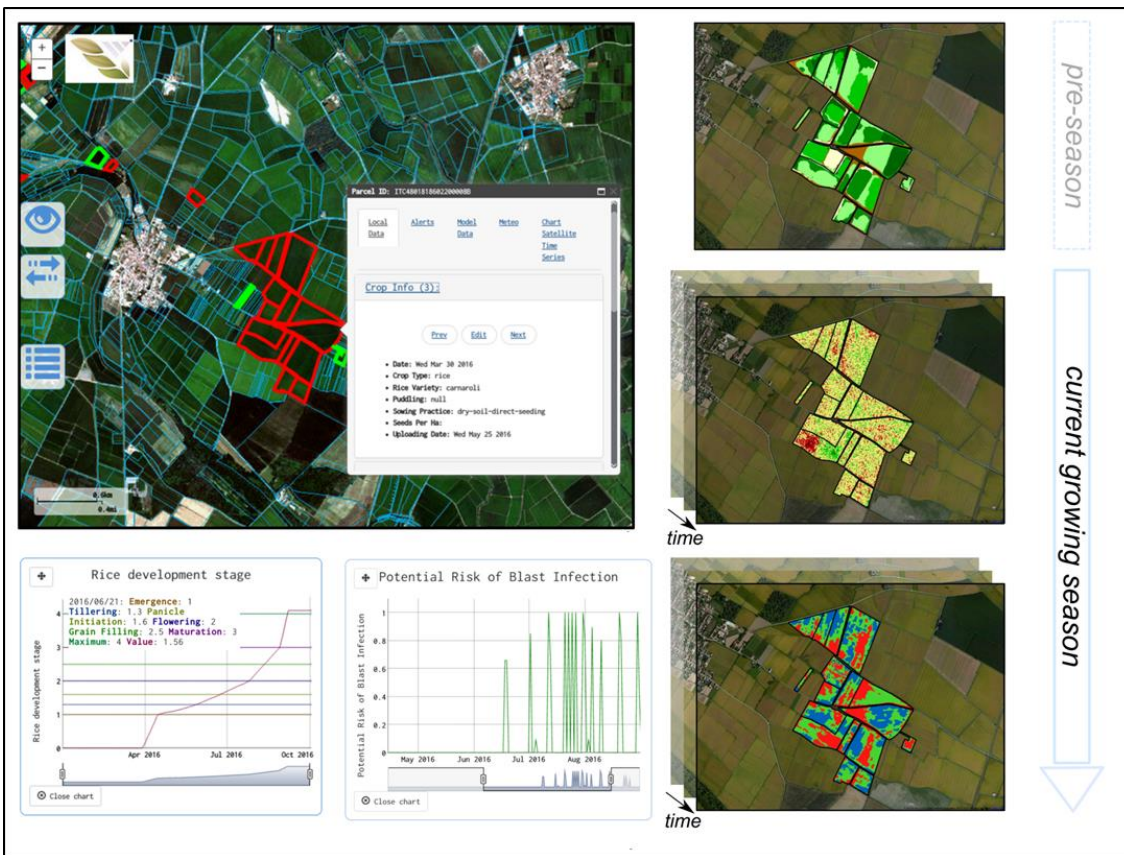

**Highlight variability in crop biomass / nutritional status**

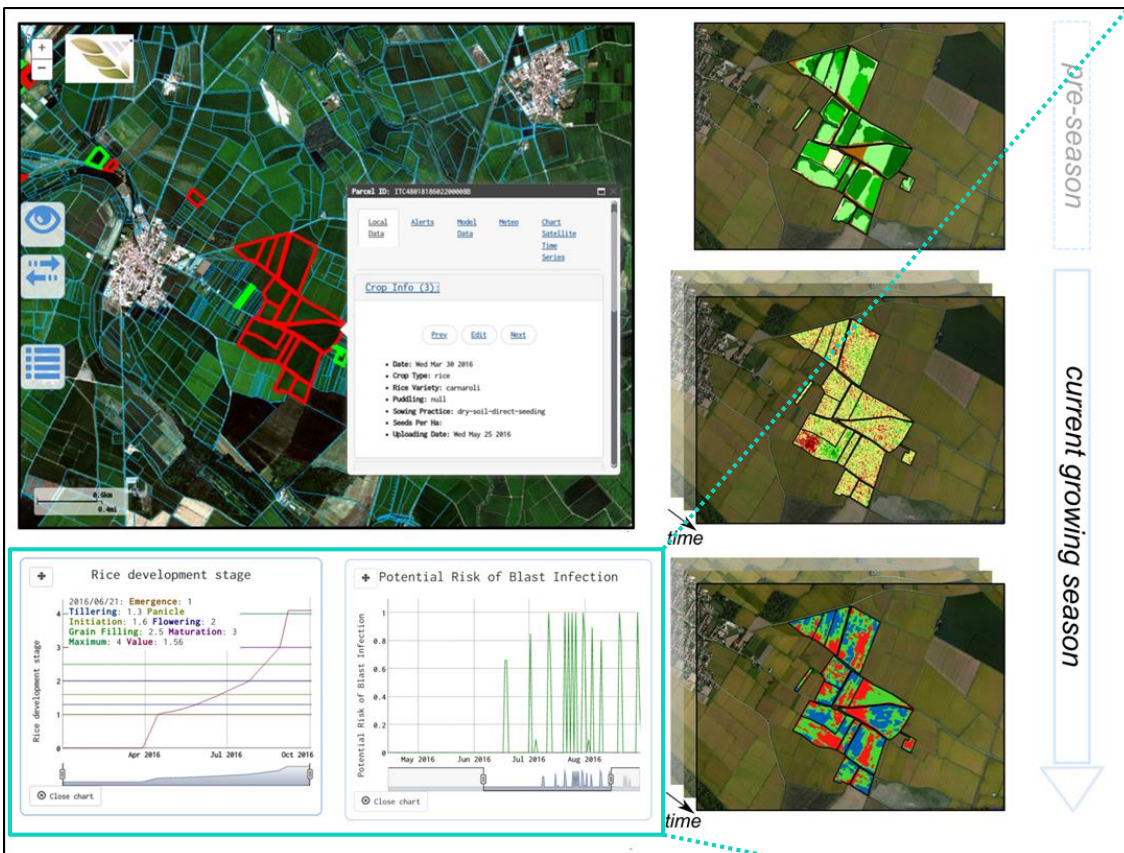

# TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

## LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

# TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

## LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

### Local Biotic risks; Development stage (EI\_Lx)

WP6

Model outputs for each field can be visualized in the ERMES GeoPortal and are used to issue mail alerts

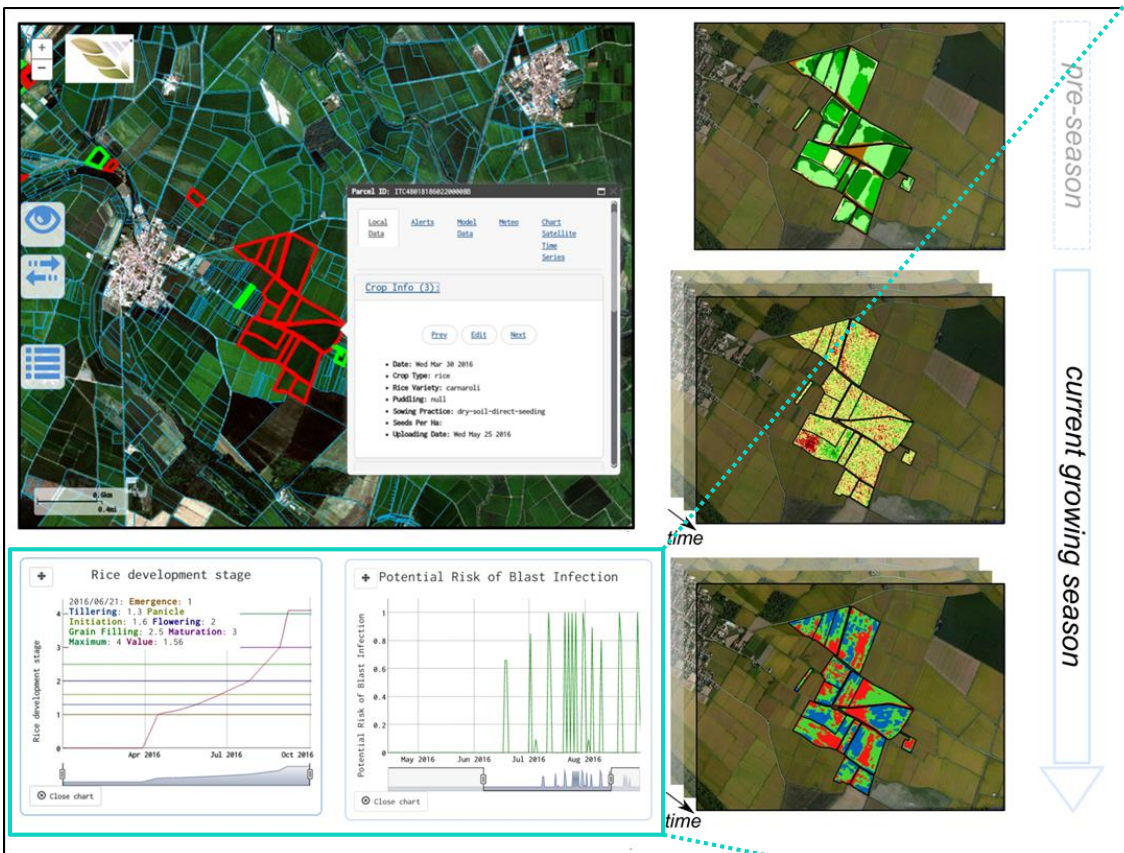

**Mail alerts can be sent upon reaching the most suitable moments for nitrogen fertilization**

## TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

### LOCAL RICE SERVICE – PRODUCTS GENERATION AND DEPLOYMENT

**Local Biotic risks; Development stage**  
(EI\_Lx)

**WP6**

Model outputs for each field can be visualized in the ERMES GeoPortal and are used to issue mail alerts

**Mail alerts can be sent upon detection of high-risk periods for rice blast infection**

## TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

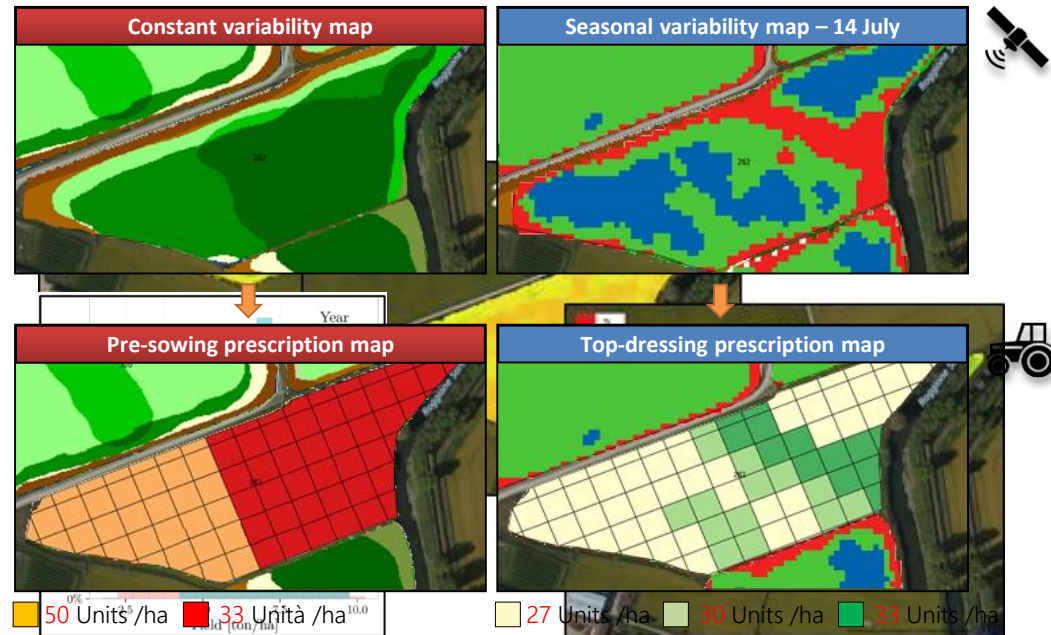

### LOCAL RICE SERVICE – EXPLOITATION OF PRODUCTS/SERVICES FOR HIGH-END APPLICATIONS

#### Support for Variable Rate Fertilization

- ERMES variability maps (constant and seasonal) were transformed in **prescription maps to be used as inputs for variable rate fertilization techniques** (Precision Agriculture)
- 2015 and 2016 experiments demonstrated that managing fields based on prescription maps generated from ERMES products allows **a more rational use of fertilizers, allowing to achieve a better homogeneity in final yield and/or a reduction of fertilization costs.**

#### Support for pre-sowing and top-dressing fertilization Italy 2015-2016

In 2015 and 2016 several rice fields were managed with different levels of Nitrogen fertilization based on ERMES variability maps

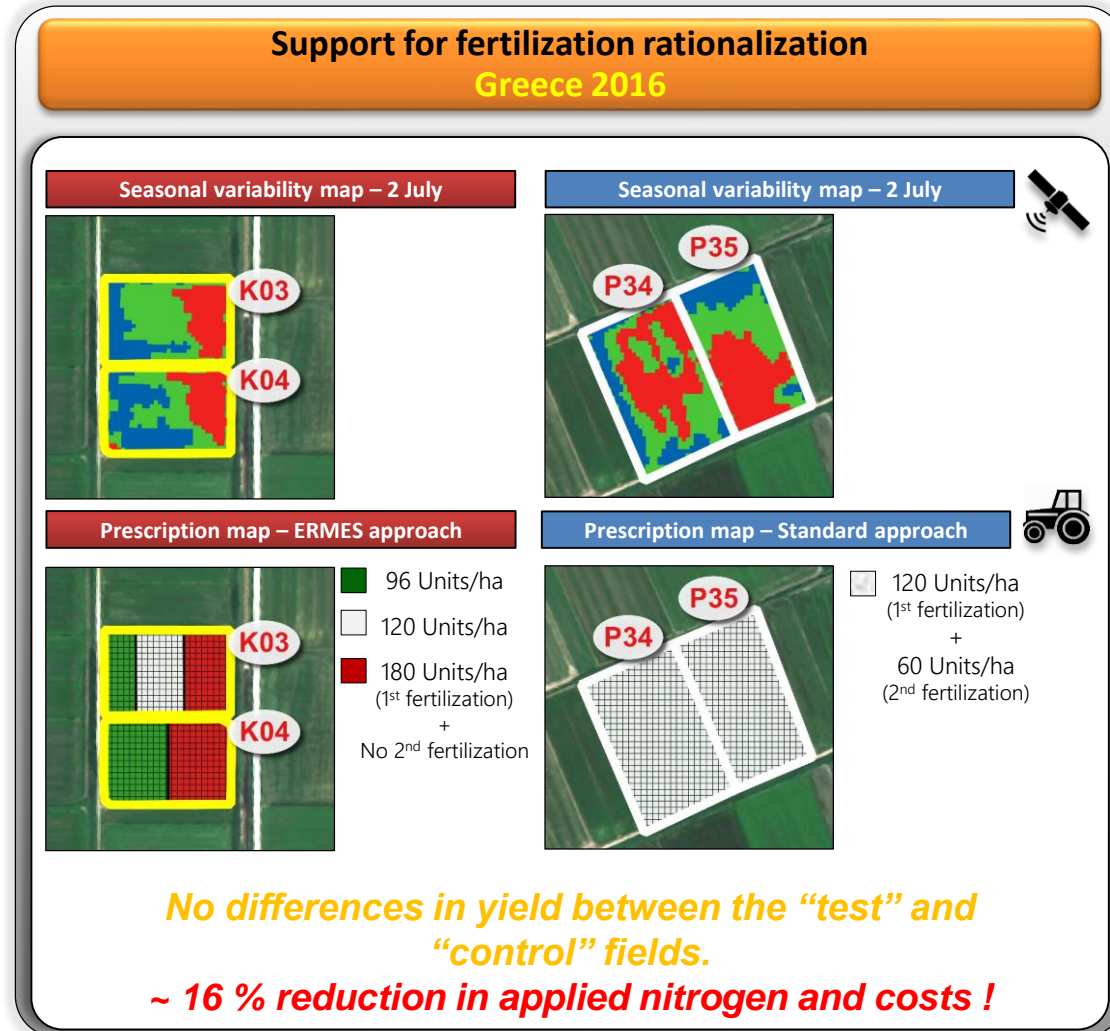

**From Constant/Seasonal Patterns to prescription maps**

## TASK 9.2: SERVICE APPLICATION AT LOCAL SCALE

### LOCAL RICE SERVICE – EXPLOITATION OF PRODUCTS/SERVICES FOR HIGH-END APPLICATIONS

#### Support for Variable Rate Fertilization

- ERMES variability maps (constant and seasonal) were transformed in **prescription maps to be used as inputs for variable rate fertilization techniques** (Precision Agriculture)
- 2015 and 2016 experiments demonstrated that managing fields based on prescription maps generated from ERMES products allows **a more rational use of fertilizers, allowing to achieve a better homogeneity in final yield and/or a reduction of fertilization costs.**

## INTERACTION AND DISSEMINATION WITH END USERS AND STAKEHOLDERS

- Demonstration strongly linked with **user interaction and dissemination activities** (WP 3 and WP 11)
- Constant work during the season with ERMES end users (in particular, farmers), to illustrate the main products and **help them in their exploitation**;
- Dissemination to other potentially interested stakeholders at the end of the season (**ERMES Open Days**)

*ERMES dissemination: towards already involved and potential end users and stakeholders !*

## PRESENTATION OUTLINE

- ✓ Introduction: WP Objectives and workplan
- ✓ Service Demonstration in Europe
  - ✓ *Task 9.1: Service application at regional scale*
  - ✓ *Task 9.2: Service application at local scale*
  - ✓ **Task 9.3: Service application Outside Europe**
- ✓ Final Remarks

## TASK 9.3: SERVICE APPLICATION OUTSIDE EUROPE

**Task Leader:** Francesco Holecz (SARMAP)

**Time Span:** Month 22-34

### Objectives

- ✓ Generate some of the ERMES regional products in the extra-European study areas :  
Senegal River Valley (Collaboration with AfricaRice) and Gambia (collaboration with IFAD)

### Deployed products

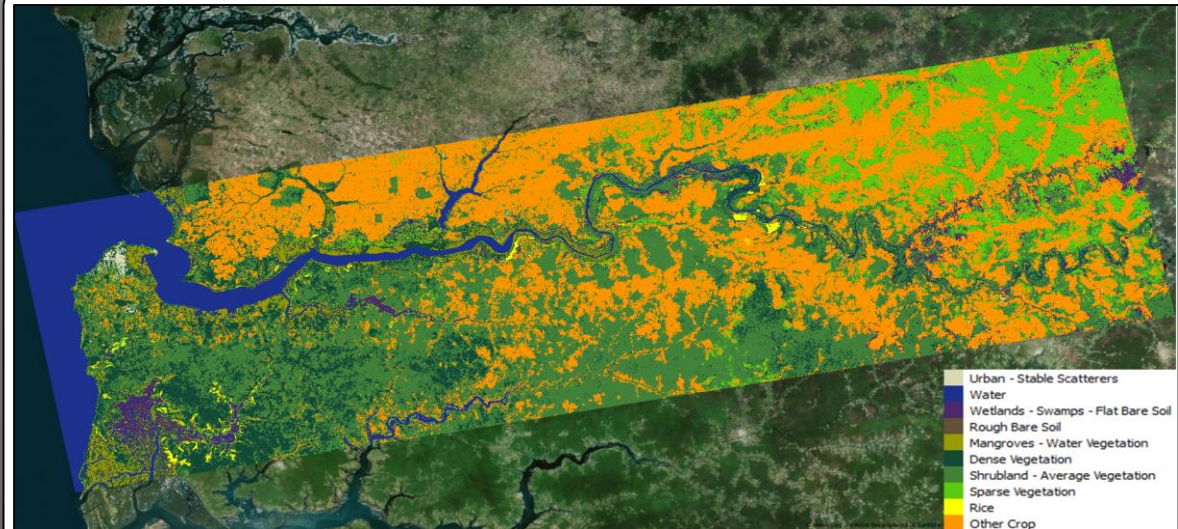

1. **Rice/Land cover maps** for the two study areas from Sentinel data;
2. Rice **Phenological maps** for the Senegal River Valley area, for the 2003-2015 period;
3. **NDVI and LAI** maps for the 2003-2016 period;
4. **Meteorological maps** for the 2003-2015 period;

## TASK 9.3: SERVICE APPLICATION OUTSIDE EUROPE

### Rice/Land cover maps

- Even basic information about crop distribution at national scale is **lacking**
- Sentinel 1 data offer a very **efficient and cost effective solution** for rice/agricultural mapping;

Land Cover Map 2016 – The Gambia

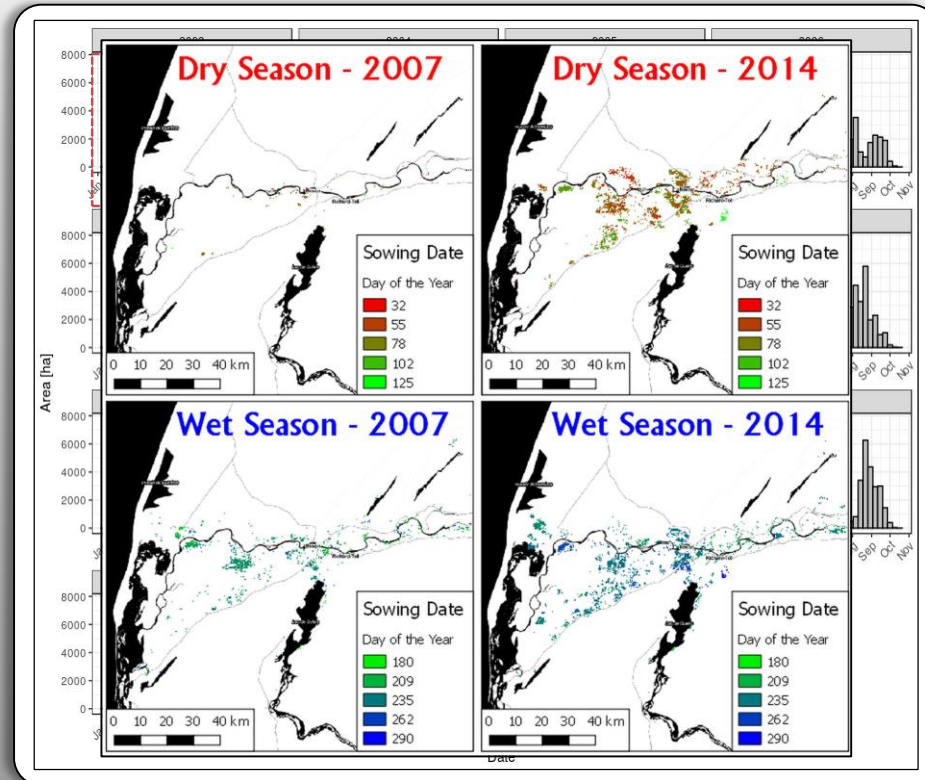

*Validation against field observation provided by Gambia Ministry of Agriculture – Accuracy > 85 % on Rice detection*

## TASK 9.3: SERVICE APPLICATION OUTSIDE EUROPE

### Phenological maps

- PhenoRice analysis on the full MODIS archive clearly highlight **variations in agricultural practices**
- Strong implications on **food security** issues, particularly if accounting **climate change** → topic of strong scientific and «institutional» interest

#### Phenology maps 2016 – Senegal River Valley

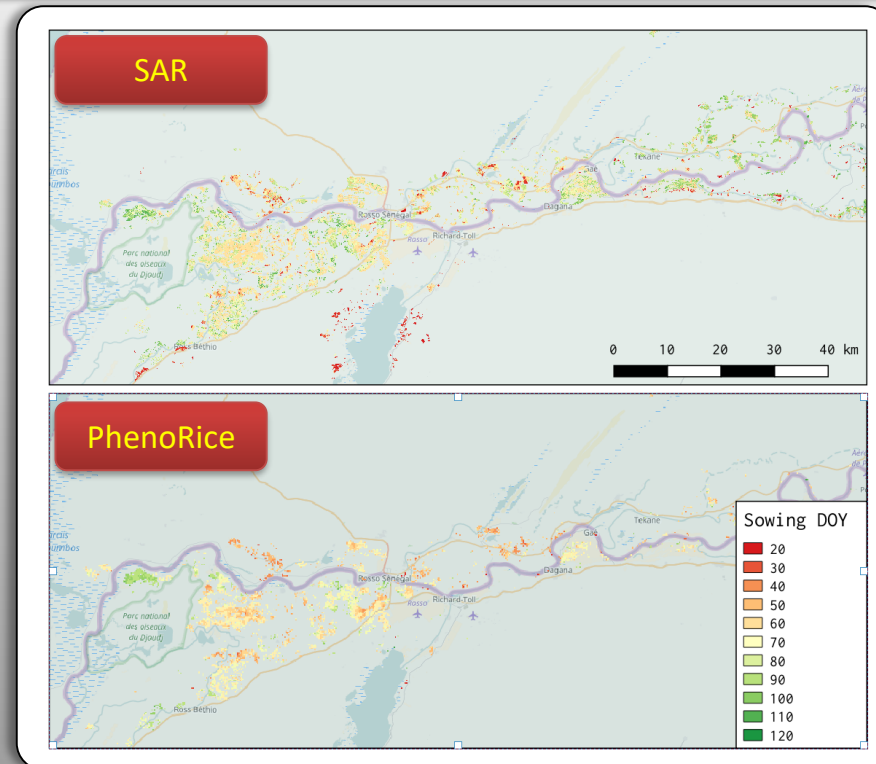

*Clear switch from Wet to Dry season cultivation*

## TASK 9.3: SERVICE APPLICATION OUTSIDE EUROPE

### Phenological maps

- Phenological maps derived from Sentinel-1 are again **coherent** with PhenoRice results (but have much higher spatial resolution)
- **Complementarity** between results of MODIS-Phenorice (for LTA analysis) and Sentinel-1 (for present/future analysis) can be exploited for developing **services in extra-European markets** (e.g., for insurance sector and/or governments or ONGs)

#### Phenology maps 2016 – Senegal River Valley

*Comparison with MODIS PhenoRice analysis – high comparability in both areas and number of seasons*

## PRESENTATION OUTLINE

- ✓ Introduction: WP Objectives and workplan
- ✓ Service Demonstration in Europe
  - ✓ *Task 9.1: Service application at regional scale*
  - ✓ *Task 9.2: Service application at local scale*
- ✓ Task 9.3: Service application Outside Europe
- ✓ **Final Remarks**

- ✓ From a technical point of view, ERMES demonstration activities were very successful:
  - Problems observed during the first year of demonstration were **solved before the 2016 rice season**, resulting in more reliable modelling results.
  - Automation of processing chains for products' generation and model running allowed to **generate in Near Real Time all the foreseen products**, with only few glitches.
  - Products and services supplied to ERMES users in the second year were characterized by a good **accuracy and timeliness**.
- ✓ High-end **added value products** derived from the ERMES portfolio were **successfully integrated** by regional and local end users **within their workflows**.
- ✓ Dissemination activities highlighted a generally **positive appreciation of the proposed products and their usefulness** and an interest for future use.

These results testify (and are due to) the **strong operationality of the developed services**, which candidates as a useful and cost-effective tools to support agro-monitoring and crop management activities.

THANKS FOR YOUR ATTENTION !

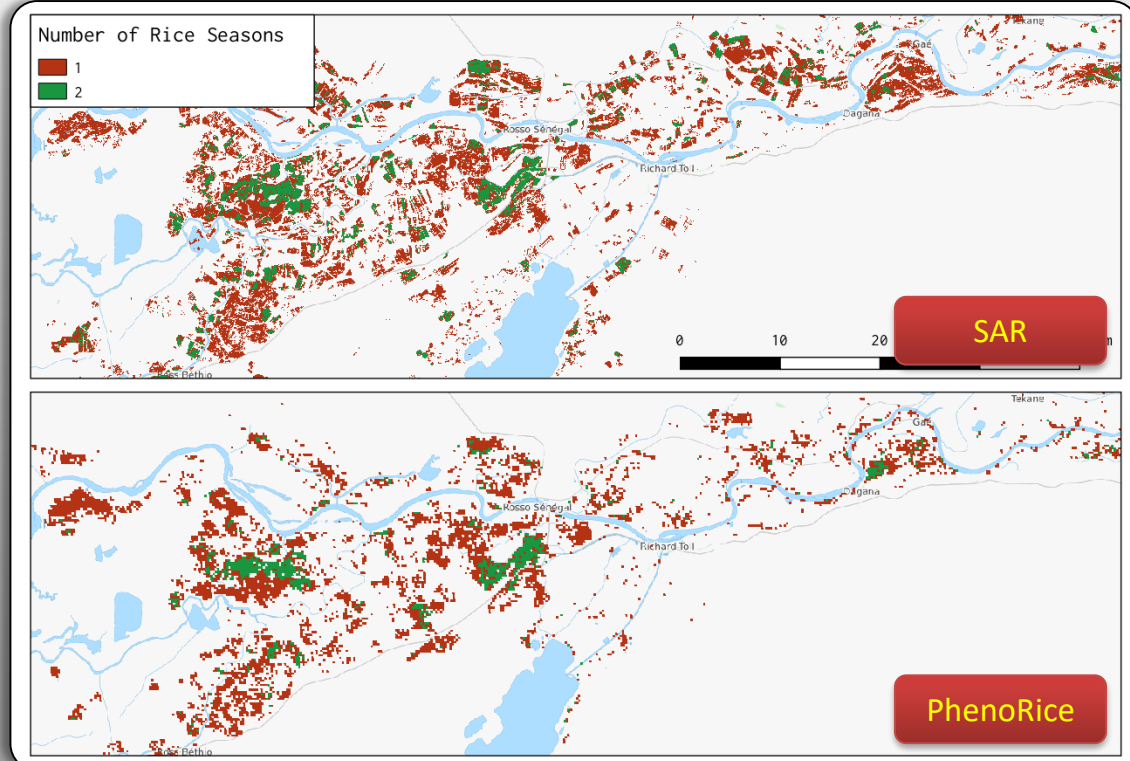

## TASK 9.3: SERVICE APPLICATION OUTSIDE EUROPE

### Rice/Land cover maps

- Even basic information about crop distribution at national scale is **lacking**;
- Sentinel 1 data offer a very **efficient and cost effective solution** for rice/agricultural mapping;

Rice Map 2016 – Senegal River Valley

*Comparison with MODIS PhenoRice analysis – high comparability in both areas and number of seasons*
